

Madejski Stadium, Reading UK

InstaLay 30lg

When new carpet tile flooring was required in the corridors of the administrative offices at the Madejski Stadium, home of Reading FC, it was fitted using InstaLay, InstaFloor's self-adhesive acoustic flooring installation system.

Caversham Flooring, who undertook the installation, also specified the InstaLay as the project needed a carpet tile with a cushion performance. By using InstaLay the required cushioning was provided while allowing standard bitumen-backed carpet tiles to be used rather than non-standard cushion-backed tiles that had a long lead time.

The InstaLay was simply loose laid over the existing sub-floor, without the need to apply a tackifier adhesive which would have contaminated the clean sub-floor. As the InstaLay release film was peeled back the carpet tiles were positioned and pressed into place on to the adhesive membrane, making installation quick, clean and easy.

High quality flooring with good underfoot comfort and high acoustic performance was rapidly delivered while minimising down time in the affected areas.

Products used:
InstaLay 30lg (3mm)
350m² (3767 sq.ft.)

Floor finish:
Bitumen backed carpet tiles

Flooring contractor:
Caversham Flooring Co Ltd, Reading

Product Benefits:

- Minimal sub-floor preparation saving significant time and money
- Loose laid over existing sub-floor
- Quick, clean installation, with no messy wet adhesives, which could be walked on immediately
- Provides good acoustic performance and underfoot comfort
- It is hygienic, resistant to decay with low VOC's for a healthy environment
- Give long term stability, performance and durability
- Made using rubber crumb from worn vehicle tyres, it is environmentally friendly and fully recyclable
